Health hazard summary
Carcinogenic. This product has the potential to cause adverse health effects. Use safe work practices to avoid eye or skin contact and inhalation. Chronic exposure to zinc chromate may result in lesions of the eyes, skin, and mucous membranes, nasal septal perforations, olfactory sense impairment, and yellowing of the teeth and tongue. Chronic exposure may also result in chronic bronchitis, rhinitis, and nasal mucosal polyps, and also lead to chemical pneumonitis. Symptoms include wheezing, pain during inspiration, and coughing. May cause sensitisation by skin contact. Zinc chromate is classified as carcinogenic to humans (IARC Group 1).

Eye
Irritant. Contact may result in irritation, lacrimation, pain and redness.

Inhalation
Irritant - toxic. Over exposure may result in respiratory irritation, coughing and nausea. Zinc chromate (Chromium (VI) compounds) is classified as carcinogenic to humans (IARC Group 1).

Skin
Irritant. Contact may result in irritation, redness, rash and dermatitis. May be absorbed through skin with harmful effects. May cause sensitisation by skin contact.

Ingestion
Toxic. Ingestion may result in nausea, vomiting, abdominal pain and diarrhoea. Ingestion can cause irritation or corrosion of the alimentary tract, circulatory collapse, and toxic nephritis.

Additional information

HEALTH EFFECTS FROM EXPOSURE:
It should be noted that the effects from exposure to this product will depend on several factors including: frequency and duration of use; quantity used; effectiveness of control measures; protective equipment used and method of application. Given that it is impractical to prepare a ChemAlert report which would encompass all possible scenarios, it is anticipated that users will assess the risks and apply control methods where appropriate.

PERSONAL PROTECTIVE EQUIPMENT GUIDELINES:
The recommendation for protective equipment contained within this report is provided as a guide only. Factors such as method of application, working environment, quantity used, product concentration and the availability of engineering controls should be considered before final selection of personal protective equipment is made.

COLOUR RATING SYSTEM: RMT has assigned all ChemAlert reports a colour rating of Green, Amber or Red for the sole purpose of providing users with a quick and easy means of determining the hazardous nature of a product. Safe handling recommendations are provided in all ChemAlert reports so as to clearly identify how users can control the hazards and thereby reduce the risk (or likelihood) of adverse effects. As a general guideline, a Green colour rating indicates a low hazard, an Amber colour rating indicates a moderate hazard and a Red colour rating indicates a high hazard.

While all due care has been taken by RMT in the preparation of the Colour Rating System, it is intended as a guide only and RMT does not provide any warranty in relation to the accuracy of the Colour Rating System. As far as is lawfully possible, RMT accepts no liability or responsibility whatsoever for the actions or omissions of any person in reliance on the Colour Rating System.
